

# MOTOMAN ME1000

# Heavy-payload horizontal articulated Robot

The powerful MOTOMAN ME1000 is characterized by its innovative design as a horizontal articulated robot with 6 axes. The compact robot was specifically developed for the horizontal transportation of heavy loads of up to 1000 kg.

Compared to conventional models with a 6-axis vertical articulated joint, the ME1000 has a lower product mass which results in significantly reduced energy consumption.

The energy-saving design was awarded with the Japanese "Energy Conservation Grand Prize".

This versatile robot with a minimal footprint is ideal for handling and assembling heavy workpieces such as automotive components, battery trays for electric vehicles, as well as for handling construction material or even packed heavy-duty pallets in logistics and e-commerce.

- High payload and rigidity with compact dimensions
- Space and energy saving due to the specific design
- Safe and precise handling of heavy parts and components in a wide range of industries
- Awarded for outstanding energy efficiency with Japanese "Energy Conservation Grand Prize"
- Excellent payload-weight-ratio

## **APPLICATIONS**

- Handling heavy automotive components or high-voltage storage systems for electric vehicles
- Transferring large cast and forged parts
- Handling ship components
- Handling building materials and precast concrete parts

# MOTOMAN ME1000

Specifications ME1000						
Axes	Maximum motion range [°]	Maximum speed [°/sec.]	Allowable moment [Nm]	Allowable moment of inertia [kg · m²]	Controlled axes	6
					Max. payload [kg]	1000
S	±180	45	End-flange center point reference (front to back) 9800	-	Repeatability [mm]	0.1
L	±170	60		-	Max. working range R [mm]	2440
U	±1000 mm	300 mm/sec.		-	Temperature [°C]	0 to +45
R	±5	10		-	Humidity [%]	20 - 80
В	+5/-3	10		-	Weight [kg]	3250
т	±90	50	-	3320	Power supply, average [KVA]	5.0
